FishSoc UNSW Activity Training Plan

Learning outcomes

- Explain FishSoc's purpose, constitution, role responsibilities and Arc affiliation requirements.
- Support beginners respectfully and follow the Club's inclusion, privacy, photo-consent and incident-reporting processes.
- Set up and use basic fishing equipment safely, explain responsible fishing practices and direct participants to current NSW rules.
- Plan or support a shore-based activity, follow the approved risk controls and record assigned work and actual contribution hours.

Training schedule

Module	Who attends	Time	Content and completion evidence
Arc executive training	Elected executives	~3 Hours	Complete the current Arc Executive Online Training and other training Arc requires for the year. Arc's AHEGS guide lists online modules, the in-person executive presentation and gendered misconduct training as relevant resources. Keep completion records.
Club governance and role induction	Executives, committee members and other regular contributors	60–90 minutes	Review the constitution, role description, annual plan, Arc affiliation duties, conduct and inclusion expectations, privacy and member-data handling, incident and grievance routes, financial or recordkeeping limits, and who supervises each task.
Responsible fishing and local rules	Fishing-session leads and beginner buddies	45 minutes	Use current official NSW guidance to cover relevant rules, species identification, sustainable practice and responsible handling. Practise explaining where participants can check site-specific rules before fishing.
Shore safety and emergency response	All event team members; participant briefing before each outing	45–60 minutes initially; 10–15 minutes on event day	Walk through the approved site boundaries, no-entry-to-water rule, weather and cancellation decision, buddy and headcount process, equipment boundaries, emergency access point and who will call for help.
Equipment and practical skills	Equipment lead, event lead and beginner buddies	45–60 minutes	Demonstrate safe storage and handling of hooks, casting space, basic knots and setups, gear checks and pack-down. Learners show safe setup and explain how they will pause an activity if spacing or equipment becomes unsafe.
Event planning and risk controls	Event lead and assigned safety contact	60 minutes before first event; refresh for new sites	Use the current approved risk-assessment process. Check site access, local conditions, weather, communications, emergency arrangements and cancellation criteria. Assign each control to a named role and confirm the event-specific assessment before delivery.

Module	Who attends	Time	Content and completion evidence
Event debrief and evidence	Assigned contributors	15 minutes after each activity	Review what went well, incidents or near misses, feedback and follow-up tasks. Record each person's actual hours, task, date, verifier and evidence location without double-counting shared work.

Role-specific practice

The event lead assigns these duties for each activity. One student may hold more than one role when the event size and risk assessment allow it, but the event lead must remain clearly identifiable.

Role	Practice and evidence
Event lead	Confirm the site and event plan; check the assessment and weather decision; run the briefing and headcount; stop or cancel if controls cannot be maintained. Evidence: signed role induction and a completed event plan.
Safety contact	Know the site boundary and emergency access point; monitor buddy and headcount arrangements; report hazards and near misses. This role does not imply first-aid or rescue qualifications.
Equipment lead	Check gear condition and quantities; keep hooks secured until use; set safe casting and demonstration areas; account for equipment and line after the activity.
Member support and communications	Share accurate access and meeting details; welcome beginners; explain conduct and photo consent; refer welfare or complaint concerns through the Club's stated process.
Records coordinator	Keep the event plan, attendance and briefing records, contributor task/hour log, feedback and incident follow-up in the approved Club storage location.

How FishSoc checks completion

- Record each module's date, duration, trainer or verifier, attendees and any required Arc certificate.
- Use a short teach-back for governance, safety boundaries, emergency response and the relevant fishing-rule source.
- Observe each learner demonstrate safe equipment setup and casting-area checks before they coach participants.
- For each event, check that the event lead can locate the approved assessment, brief the team and explain the go/no-go decision.
- Ask contributors to confirm in writing that they received the induction and know how to raise a hazard or incident.

Evidence to retain

Record	Keep with the annual Club file
Arc training	Current completion certificates/screenshots for each executive seeking recognition.
Club induction	The versioned slides or handout, attendance/acknowledgement, date and a short knowledge-check record.
Event-specific briefing	The event risk assessment, briefing checklist, team roles, site conditions and any update made before the activity.
Contribution evidence	Delegated task, actual hours, date, verifier and work product or event record.
Review and improvement	Debrief notes, feedback, incidents/near misses and assigned actions; store sensitive reports separately with restricted access.

Training record template

Date	Student and role	Module and duration	Verifier / evidence saved
[dd/mm]	[Name] / [role]	[Module] / [time]	[Name] / [record link]
[dd/mm]	[Name] / [role]	[Module] / [time]	[Name] / [record link]
